

PIONEER ACADEMY
350 kW | WAYNE
CORE DEVELOPMENT GROUP

What is it like building solar in New Jersey, a state that maintains solar incentive programs?

New Jersey's status as a premier national solar market is driven by a highly favorable return on investment, thanks to lucrative state incentives, net metering and property tax exemptions. These policies drastically reduce costs and provide organizations with a competitive edge. Furthermore, NJ's solar programs benefit communities by enabling schools like Pioneer Academy to achieve energy independence, freeing up critical utility funds to reinvest directly into education. This environment is precisely why Core Development Group has not only been headquartered in the state for 15 years but has thrived here, growing into a nationally recognized solar and clean energy EPC contractor.
